INTRODUCTION

Governing lipitor and lipstick: Capacity, sequencing, and power in international pharmaceutical and cosmetics regulation

ABSTRACT

Over the last three decades, the pharmaceutical and cosmetics industries have become increasingly global. To ensure product safety and consumer protection, regulators in leading markets have applied domestic rules extraterritorially and have joined forces to harmonize rules through transgovernmental cooperation. Yet whereas the United States has long been the dominant player in international market regulation of pharmaceuticals, the European Union has decisively shaped global rules for cosmetics. What explains differences in agenda setting power across the two closely-related industries? We compare and contrast the expectations of a realist account focused on market size and a liberal functionalist argument centered on the role of market friction with a historical institutionalist explanation stressing the relative sequential development over time of domestic regulatory capacity in leading markets. The

empirical evidence shows that domestic regulatory institutions systematically shape international market regulation. Historical institutionalism provides an important complement to existing transgovernmental research, offering clear expectations for the origins of and terms of influence within such cooperation. More generally, it opens up a rich toolbox for the analysis of industry-level global market governance, which affects the daily lives of many millions of consumers.

ACKNOWLEDGEMENTS

This paper has benefitted tremendously from workshops at Temple University, Georgetown University, and UC Berkeley, that led to this special issue; we would like to thank all participants as well as the sponsoring institutions. In particular, we would like to acknowledge the extremely helpful comments and suggestions on various earlier drafts from Adriana Brown, Tim Büthe, Richard Deeg, Dan Drezner, Henry Farrell, Orfeo Fioretos, Kate McNamara, Craig Pollack, Elliot Posner, David Vogel, Steve Vogel, Steve Weber, and John Zysman. Earlier versions were also presented at the Annual Meeting of the International Studies Association, San Francisco, March 26–28, 2008 and the Joint Session of the European Consortium for Political Research (ECPR), Lisbon, April 14–19, 2009. Part of this research was supported by a Spanish Ministry of Science and Innovation grant (ECO2008-01527).

Notes

1 Many issues shape international markets for pharmaceuticals and cosmetics. This paper focuses on the fundamental decision of whether to allow a product to enter the consumer market and the safety standards that producers must follow during production.

- 2 This argument draws on historical institutional work such as <u>Zysman (1994)</u> and <u>Thelen (2004)</u>.
- 3 Jurisdictions can consciously build-up regulatory capacity, as happened during the period of telecommunications liberalization, but such build-up does not happen overnight. See (<u>Vogel</u>, 1996; <u>Gilardi</u>, 2002).
- 4 The paper focuses on structural power embodied in regulatory capacity and not the underlying preferences of the lead regulators. For an examination of preferences see (<u>Singer</u>, 2007).
- 5 A growing rationalist literature on the design of international institutions considers these questions. See (<u>Koremenos, Lipson and Snidal, 2001</u>).
- 6 This transposes sequencing arguments developed in the comparative setting to international issues. See (Posner, this issue; Newman 2008b; <u>Pierson, 2004</u>).
