Abstract

There is an Alice-in-Wonderland awe associated with nanotechnology. While the technology is both exciting and hopeful for many good reasons, for businesses, and the lawyers who counsel them, the lack of certainty in areas involving potential risk is unsettling. The U.S. Environmental Protection Agency (EPA) is only now beginning to think through how best to apply the authority it has under the traditional environmental statutes, and to adopt regulatory programs and policies to address the potential risks and regulatory challenges nanotechnology invites. While research is progressing briskly on key hazard and exposure nanotechnology issues, much remains to be done leaving commercial applications of nanotechnology in new, unsettled waters. This article identifies some of these challenges and the non-conventional, innovative ways that lawyers, business managers, risk assessors, and others must embrace to manage risk and avoid liability effectively.

We Care About Your Privacy

We and our 835 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#).

We and our partners process data to provide:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device.

Personalised advertising and content, advertising and content measurement, audience research and services development.

¹⁸See 70 Federal Register 24574 (May 10, 2005). The EPA convened a public meeting to discuss various options in June 2005. The discussion at the public meeting yielded a consensus that a voluntary program on existing engineered nanoscale materials would have significant value. Shortly thereafter, the EPA created an interim ad hoc work group on nanoscale materials (Work Group) as part of the National Pollution Prevention and Toxics Advisory Committee (NPPTAC), a federal advisory group tasked with advising OPPT on TSCA and pollution prevention matters. On November 22, 2005, after the Work Group had met several times, NPPTAC submitted to the EPA Administrator its Overview Document on Nanoscale Materials, which outlined a framework for a EPA approach to a voluntary program for engineered nanoscale materials and a complementary approach to new chemical nanoscale requirements under TSCA, and addressed various other issues pertinent to engineered nanoscale materials. NPPTAC, Overview Document on Nanoscale Materials (November 22, 2005). <http://www.epa.gov/opptintr/npptac/pubs/nanowgoverviewdocument20051125.pdf> (accessed February 22, 2008).

¹⁹Letter from James B. Gulliford, Assistant Administrator for Prevention, Pesticides & Toxic Substances, to Stakeholders (October 18, 2006). According to the letter, the EPA's goal is “to implement TSCA in a way that enables responsible development of nanotechnology and realizes its potential environmental benefits, while applying sound science to assess and, where appropriate, manage potential risks to human health and the environment presented by nanoscale materials.” <http://www.epa.gov/oppt/nano/nano-letter.pdf> (accessed February 22, 2008).

²⁰ See 72 Federal Register 38079–38085 (July 12, 2007). All the notices and accompanying documents are available at <http://www.epa.gov/opptintr/nano/nmspfr.htm> (accessed February 22, 2008). The first notice solicited public comment on the EPA's proposed Information Collection Request under the Paperwork Reduction Act, including a draft form that NMSP participants could use to submit data to the EPA; the second announced a public meeting on the NMSP; and the third solicited public comment on two draft documents: (1) the “Concept Paper for the Nanoscale Materials Stewardship Program under TSCA”; and (2) the “TSCA Inventory Status of Nanoscale Substances—General Approach.”
