ABSTRACT

We conducted this research based on a qualitative approach to describe the opinions of older widows and widowers. The study included a purposive sampling and

inclusion criteria were age, gender, education, and marital status. Participants were female, aged 50 and above, with their own children. Based on the interviews, the data were analyzed using content analysis. The results showed that the barriers to remarriage among older people were related to the concept of remarriage.

We Care About Your Privacy

We and our 845 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#)

We and our partners process data to provide:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device. Personalised advertising and content, advertising and content measurement, audience research and services development.
