## We Care About Your Privacy

We and our 855 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

through both information sharing and satisfaction obtained from the relationship with the provider.

**Research Limitations:** The analysis has been developed from the retail perspective. We suggest that future research focus on the retailer's and the provider's perspectives.

**Practical Implications:** In the context of SCM, the competitive advantages achieved through IT use derive from a better network of relationships between the firms involved as a result of greater information quality and information sharing. Specific use of ITs stimulates greater information sharing between retailer and provider and thus greater satisfaction and better perceived performance of the retailer in the relationship with the provider. However, the effect of IT use on information sharing occurs only through the quality of the information shared.

**Originality/Value:** The study shows that information quality is an antecedent of information sharing and that both information quality and information sharing act as necessary conditions for improving the retailer's perceived performance in the relationship with the provider. This article develops a measurement scale to evaluate the intensity of IT use. Finally, the research confirms that firm performance can be modeled as a second-level latent variable composed of three different dimensions (economic benefits, marketing benefits, and adaptation benefits).

Question

2. This result is obtained by calculating the percentage of IT use for each of the management activities in the customer-provider relationship included in Question 2, also described in the appendix.
3. The correlation matrix for the variables used in the model is included in [Table 1](#) of the appendix.
