We Care About Your Privacy

We and our 865 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

Notes

¹ Despite widespread attention to the problem, the definition of vacancy remains elusive and is left primarily to local discretion ([Shlay & Whitman, 2006](#)). For example, Pittsburgh, Pennsylvania defines a vacant building as, “a structure which is vacant and is either unsecured, secured by other than normal means, unsafe, non-compliant with housing or building codes, illegally occupied, or unoccupied for over a year with pending code enforcement citations” ([Hirokawa & Gonzalez, 2010](#), p. 630).

² According to the [Environmental Protection Agency \(2010\)](#), the most common sources of childhood lead exposure are lead paint, commonly found in homes built prior to 1978 and lead contaminated soil. Lead contaminated dust, present in homes with lead paint and in urban air as soil sediment is diffused by wind and traffic is another common source of contamination.
