## Abstract

Objective of the present study was quantification of valerenic acid in rhizome of three plant species which is generally traded under the name of Jatamansi. A simple, rapid, cost-effective and accurate high performance thin layer chromatographic method has been developed for quantification of valerenic acid in *Valeriana jatamansi*, *Nardostachys jatamansi*, and *Selinum vaginatum*, which is one of the stable compounds and designated as a key marker compound. Separation and quantification of valerenic acid was achieved by HPTLC using ternary mobile phase of toluene: ethyl acetate: formic acid (80:20:5 v/v/v) on precoated silica gel 60F<sub>254</sub> aluminum plate and densitometric determination was carried out in  $\lambda_{280}$  absorption-reflectance UV mode by deuterium lamp.
