Examinamos la eficiencia de las cooperativas de crédito brasileñas a través del análisis envolvente de datos (DEA – Data Evolopment Analysis) y sus relaciones con los grupos de clasificación, usando las regresiones Tobit. Aplicamos el modelo analítico tradicional y otro enfoque para las cooperativas. También analizamos la productividad, eficiencia y cambios tecnológicos, en base al índice Adyacente de Malquist. Los resultados más importantes indican que la eficiencia no es un factor determinante del vínculo existente entre los miembros de las cooperativas. Sin embargo, las cooperativas con admisión libre, suelen ser menos eficientes que aquellas que imponen restricciones a su admisión. También es de interés mencionar que los resultados contrastantes generados por los modelos señalan la necesidad de contar con modelos específicos que tomen en cuenta resultados importantes para las cooperativas.

RESUMO

O presente trabalho estudou a eficiência das cooperativas de crédito brasileiras, através da DEA e suas relações com grupos de classificação, usando as regressões Tobit. Foi empregado um modelo de análise tradicional para os bancos e outra abordagem para as cooperativas. Também foram analisadas a produtividade, a eficiência e as mudanças tecnológicas, com o uso do índice Adjacent Malmquist. Os principais resultados indicam que a vinculação entre os membros cooperados não é um fator determinante para a eficiência; no entanto, as cooperativas com admissão livre tendem
