ABSTRACT

This study examines the role of adult children in providing emotional support towards elderly parents and adult children, while men gave more practical help to children than did

We Care About Your Privacy

We and our 843 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. women. Finally, the downward transfers were directed more often towards daughters than to sons by women (emotional closeness and childcare) and men (practical help and childcare). Women directed upward investment more often towards mothers than fathers (emotional closeness and care). The results are discussed with reference to reproductive value and intergenerational stake hypotheses.
