## Abstract

The study examines the association between corporate leverage and banks' non-performing loans. Using data on Indian manufacturing sector in India for 1993–2004, the findings indicate lagged leverage to be an important determinant of bad loans of banks. In terms of magnitudes, a 10 percentage point rise in the corporate leverage is, on average, associated with 1.3 percentage point rise in sticky loans relative to loans, after a one period lag. In terms of policy implications, the analysis suggests that the leverage points to

An earlier draft of the paper was presented at the IGIDR Conference on Money and Finance in the Indian Economy in February 2005. I would like to thank, without implicating, the seminar participants, and especially, Prof. Benjamin Friedman, Prof. D. M. Nachane, K. Ramachandran, B. Kamaiah, Kaushik Chaudhuri, Golaka Nath and Y. P. Gupta for their incisive comments on an draft. The views expressed and the approach pursued in the paper reflects the personal opinion of the author.

## Notes

- <sup>1</sup> The industry groups considered in the study includes: Chemicals, Construction, Diversified, Electricity, Food and beverages, Heavy industries, Machinery, Metal and metal products, Miscellaneous manufacturing, Non-metallic mineral products, Textiles and Transport equipment.
- <sup>2</sup> This database is increasingly employed in the literature for firm-level analysis on Indian industry. See, for instance, Ghosh and Sensarma ([2004](#)) for a recent application of the database on the interlinkage between monetary policy and corporate governance.
- <sup>3</sup> Industrial sector comprises Manufacturing, Mining and quarrying and Electricity.
- <sup>4</sup> The banking sector in India presently comprises of 27 state-owned, 20 incumbent and ten de novo private domestic sector banks and 33 foreign banks. The totality of these banks is referred to as the commercial banking sector. The financial year for commercial entities (banks and corporates) extends from the first day of April of a particular year to the last day of March of the subsequent year.

<sup>5</sup> We also experimented with the square of DER, to capture possible non-linearities in the relationship between the variables. The results are not reported) suggest that the relationship is non-linear.
