## Abstract

The validity of purchasing power parity (PPP) is examined between Turkey and trading partners. The results show that the long-run purchasing power parity hypothesis is supported by the test and the short-run purchasing power parity hypothesis is rejected. The results also show that the influence of the type of PPP in Turkey is significant. The results are robust to the type of PPP in Turkey.

### We Care About Your Privacy

We and our 845 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#)

We and our partners process data to provide:
