Abstract

This article examines the comovement dynamics between the developed European stock markets of the United Kingdom, Germany, France and Austria. After applying a Dynamic Conditional Correlation-Generalized Autoregressive Conditional Heteroskedastic (DCC-GARCH) and wavelet multiscale analysis on a daily return series for the period 1997 to 2010, we found that (1) comovements between stock market returns are time varying and scale dependent; (2) financial crisis in the observed period did not uniformly increase comovement between stock market returns across all scales;

(3) the global financial crisis of 2007–2008 only slightly and temporarily increased the already high level of comovement between the observed stock markets.

Keywords:

- DCC-GARCH
- wavelet analysis
- stock markets
- European stock markets
- comovements

JEL Classification:

- G15
- G11
- F36
