ABSTRACT

This 2001-2013 panel study finds 33% of part-time employees to be underemployed, disproportionate to the gap between the demand for and supply of labour. This is new to our study, the first to report that the gap between the demand for and supply of labour is by personal characteristics of individuals of the labour force. The underemployment is a result of the lack of specialization in the labour force. The underemployment is a result of the lack of specialization in the labour force. The underemployment is a result of the lack of specialization in the labour force.

We Care About Your Privacy

We and our 845 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#)

We and our partners process data to provide:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device. Personalised advertising and content, advertising and content measurement, audience research and services development.
