Disclosure statement

No potential conflict of interest was reported by the authors.

Notes

- ¹ We classify options trades as those made by domestic individual investors, domestic institutional investors, and foreign institutional investors. The proportions and trading volumes of foreign individual investors and government-owned firms are negligible in the KOSPI200 options market.
- ² The lagged realized volatility (RV) is included in our model to take into account volatility persistency and clustering. If we do not control for the RV time series, the significantly estimated coefficients on the options demand measures do not guarantee volatility information content of options trading. When we incorporate more lagged RV terms into the regression equation, our conclusion remains the same.
