ABSTRACT

In recent years, mandatory convertibles (MCs) have become a popular means of raising capital, ...

We Care About Your Privacy

We and our 841 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#)

We and our partners process data to provide:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device. Personalised advertising and content, advertising and content measurement, audience research and services development.

Notes

1 Given the distribution function of the project output , the distribution function F of output is , where is the probability of an event. If is random, all the results hold except that F is replaced by the joint distribution function of . We can also allow the randomness of to be resolved earlier or later than .

2 We follow the incomplete-contract approach proposed by Grossman and Hart ([1986](#)). Refer to their paper on the concepts of 'a variable being ex ante nonverifiable but ex post observable', 'an ex post decision being ex ante uncontractible', 'ex post renegotiation', and 'an efficient bargaining outcome'.

3 Adding another random shock in the second period will add a lot of technical complication. Such a complication is unnecessary for the purpose of this paper.

4 We will define y and y is defined discontinuously ([1984](#)).

5 He issued is the total shareholding firm may total income dividends on common stock. However, if there is a random stock in the second period,

the timing of a dividend payment is relevant and it reflects risk sharing, which would force us to specify dividends on common stock explicitly.
