## We Care About Your Privacy

We and our 861 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

Show Purpose

caregivers who had relinquished their role by the second year, although the level of psychological stress actually declined. Primary mediators are a key component of the relationship between allostatic load and prior stress. When allostatic load is treated as an outcome of stress, it is important to distinguish environmental and psychological stress.

Keywords: Stress allostatic load caregiving dementia

## Acknowledgments

This study was conducted with the financial support of Project Grant No.160042 from the National Health and Medical Research Council of Australia. We also acknowledge the support of the Ian Potter Foundation and the Flinders Medical Centre Foundation, who funded the assessment of relinquished caregivers.
