## Notes

We would like to thank the UK Research Councils-funded Tyndall Centre for Climate Change for support for this research.

It is important to note that we are working with a larger group of researchers and postgraduate students who are currently undertaking exactly these kind of investigations through detailed studies of the CDM and voluntary offsets, including Emily Boyd, Adam Bumpus, John Cole, Christian Ellerman, and Deborah Ley at Oxford and Esteve Corbera in Tyndall. Adam Bumpus has a parallel article in preparation focusing on the materialities of offsets using examples from his fieldwork in Honduras (see Bumpus [2009](#)).

'Black liquor' is the term used for waste from pulp and paper processing, which is burnt to produce electricity and/or heat.

Who should be governed to reduce deforestation and how? Multiple governmentalities at the REDD+ negotiations:
