We Care About Your Privacy

We and our 855 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

ACKNOWLEDGMENTS

The authors would like to thank Atle Oglend for helpful discussions. Any remaining mistakes are of course the authors' responsibility.

Notes

Dahl and Oglend ([2014](#)) provide a more general overview of seafood price volatility.

Forward contracts for salmon was introduced by Direct Hedge in 1999, while FishPool introduced futures contracts in 2006 (Solibakke, [2012](#); Oglend, [2013](#)).

Tyholdt ([2014](#)) provides an interesting twist in investigating the impact of biophysical factors on growth.

This is important issues also for other species (Smith et al., [2014](#)).

Applying a Phillips–Perron test led to the same conclusion. For EBIT, the test statistic was -3.011 (constant and trend, two lags). With a critical value at the 5% level of -3.596 , we can not reject a unit root. The test statistic for EBIT/kg is -3.286 (constant and two lags); with a critical value at the five percent level being -2.997 , we reject a unit root.

A unit root test was also performed on the residuals from the cointegration equation. The test statistic was -1.96 , which is not significant at the 5% level. This result is included in the appendix. The critical value at the 5% level being -1.96 , we conclude that there is no unit root in the residuals.

It is worth noting that the results from the cointegration analysis are robust to the inclusion of the variable Y_{t-1} in the model.

Guttormsen et al. (2014) show that the relationship between salmon prices and aquaculture production is non-linear.
