Show Purpose

such that electronic gaming machine (EGM) and lottery expenditures and number of lottery games played decreased with increased debt; this effect was most pronounced at elevated monetary prizes. The association between duration of EGM play and monetary payout was moderated by gender only. Results suggest that self-reported gambling behaviours increased with monetary payout even across qualitatively different gambling products, and across gamblers with different motivations for gambling, levels of impulsivity, and negative affect. The restriction of monetary payouts warrants further research attention as a form of problem gambling prevention.

Keywords:

- Gambling
- monetary payout
- debt
- motivation
- impulsivity

Acknowledgements

We are indebted to the employees and volunteers of the Centre for Addiction and Mental Health (CAMH), in particular Ms Susan Dickens, Daniela Avila Murati and Heba Shamsi, who supported numerous aspects of protocol implementation. We are finally indebted to all participants for their involvement in this project.
