monetary payout was moderated by gender only. Results suggest that self-reported gambling behaviours increased with monetary payout even across qualitatively different gambling products, and across gamblers with different motivations for gambling, levels of impulsivity, and negative affect. The restriction of monetary payouts warrants further research attention as a form of problem gambling prevention.

## Acknowledgements

We are indebted to the employees and volunteers of the Centre for Addiction and Mental Health (CAMH), in particular Ms Susan Dickens, Daniela Avila Murati and Heba Shamsi, who supported numerous aspects of protocol implementation. We are finally indebted to all participants for their involvement in this project.
