Abstract

Restrictions on monetary payout may promote player engagement in gambling as a form of entertainment rather than as a source of income. Our objective was to evaluate the effects of monetary prize magnitude upon gambling behaviour in a community sample,

One hundred and twenty participants were recruited from a community sample and asked to play a gambling game. The game was designed to be played on a mobile device. The game was played for 10 minutes. The amount of money won was varied. The amount of money won was varied. The amount of money won was varied.

Results showed that increasing the amount of money won led to an increase in the number of spins. The number of spins was increased. The number of spins was increased. The number of spins was increased.

Conclusions: The results of this study suggest that increasing the amount of money won leads to an increase in the number of spins. The number of spins was increased. The number of spins was increased. The number of spins was increased.
