Yet, the transition, by non-state voluntary carbon trading carbon although its voluntary representative of regime (VCM) and

This study analyses perceptions of, and reactions to, the new regulatory environment within the VCM. We apply the Discursive Agency Approach to scrutinize the institutions, discourses and influential agents involved in the VCM, and the strategic practices they apply to manage the transition towards the Paris regime. We find two dominant coping strategies: to align the voluntary offsetting mechanism with the Paris Agreement, and to re-invent its overall purpose as a tool to deliver sustainable development rather than solely emission reductions. Based on these results, we outline 'thought spaces' for a future VCM: (1) voluntary and non-party offsetting beyond nationally determined contributions (NDCs), (2) results-based financing for emission reductions and sustainable development, and (3) private climate action under international oversight.

Key policy insights

- The Paris Agreement threatens the VCM's business model, prompting market agents to frame and legitimize their work in new ways.
- The voluntary market's viability depends on the future accounting rules for emission reductions under Paris Agreement Article 6. Discursive struggles surround the risks of double counting and NDC ambitions.
- Based on an understanding of the past, we can draw lessons from agents' attempts to re-locate their work within the Paris Agreement, and their future actions will shape...
