

I wish to thank T. Aste, M. Dacorogna and E. Scalas for fruitful discussions and advice. I acknowledge partial support from the ARC Discovery Projects: DP03440044 (2003) and DP0558183 (2005), COST P10 "Physics of Risk" project and M.I.U.R.-F.I.S.R. Project "Ultra-high frequency dynamics of financial markets".

Notes

†In the literature, self-affine processes are also called self-similar.

†We use H without parentheses as the original Hurst exponent, and H(q) as the generalized Hurst exponent.
