## Abstract

Extant research on nonsuicidal self-injury (NSSI) in females with dissociative symptoms found to be significantly associated with NSSI and

suicidal self-injury in the community. These findings were primarily clinical in nature. In addition, these findings were found to be significant in the dissociation and risk.

### We Care About Your Privacy

We and our 878 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting I Accept enables tracking technologies to support the purposes shown under we and our partners process data to provide. Selecting Reject All or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the Show Purposes link on the bottom of the webpage. Your choices will have effect within our Website.
