# The Dynamics of Financial Market Integration Between Chinese A- and H-Shares

#### **ABSTRACT**

This study examines the dynamics and underlying determinants of integration based on cross-listed Chinese A-shares and Hong Kong H-shares from January 1996 to December 2016. We focus mainly on three liberalization reforms: the qualified foreign institutional investors (QFII) policy, the qualified domestic institutional investors (QDII) policy, and the Shanghai-Hong Kong Stock Connect program. Our results show that the QDII policy has significantly increased the integration between the Mainland China and Hong Kong stock markets, although the extent to which any stock has been affected is partly dependent upon certain firm-specific characteristics, including liquidity, market value, and volatility. However, we do not document the similar effect of the QFII policy and the Shanghai-Hong Kong Stock Connect program on the integration dynamics.

**KEY WORDS:** 

### Acknowledgments

We thank Haocong Song for his excellent research assistance. We are also grateful to the editor and anonymous referees for helpful suggestions.

#### Notes

- 1. Market integration is generally defined as the correlation between markets, which show different expected returns. As Bekaert and Harvey (1995) argue: "Markets are completely integrated if assets with the same risk have identical expected returns irrespective of the market." and "If a market is segmented from the rest of the world, its covariance with a common world factor may have little or no ability to explain its expected return."
- 2. Cai, McGuinness, and Zhang (2011) hypothesize a decrease in H-share price discount relative to A-share price, indicating an increase in cointegration between A- and H-shares.
- 3. As the Shanghai-Hong Kong Stock Connect scheme only has impact on companies listed in Shanghai, we have also examined the impact based on the companies listed in Shanghai and found qualitatively similar results. We thank an anonymous referee to point this out.
- 4. According to Securities Daily, QDII have invested almost 70% of their net assets into Hong Kong until September 2016.
