Abstract

Neoclassical economics does not offer a useful model of finance, because economic and financial behavior have different motivational dynamics. The law of supply and demand operates among rational valuers to produce equilibrium in the marketplace for utilitarian goods and services. The efficient market hypothesis (EMH) is a related model applied to financial markets. The socionomic theory of finance (STF) posits that contextual differences between economics and finance produce different behavior, so that in finance the law of supply and demand is irrelevant, and EMH is inappropriate. In finance, uncertainty about valuations by other homogeneous agents induces unconscious, non-rational herding, which follows endogenously regulated fluctuations in social mood, which in turn determine financial fluctuations. This dynamic produces non-mean-reverting dynamism in financial markets, not equilibrium.

Acknowledgments

The authors gratefully acknowledge the comments of Robin Hogarth, Marco Novarese, Terry Burnham, John Nofsinger, Laurence Chud, Philipp Otto, and Gordon Graham on an earlier draft. They also thank Valeri Safonov for his help in obtaining the Russian materials cited in the appendix, Vadim Pokhlebkin for translating them, and Deepak Goel for his help with our statistical analysis. This paper derives in part from Prechter [[1999](#), pp. 393-395] and from Prechter's presentation to professors and graduate students at MIT's Lab for Financial Engineering on September 12, 2003. Some of this material was presented in substantially different form in Prechter [[2004](#)] and [Prechter and Parker \[2004\]](#). This research was supported in part by a grant from the Socionomics Foundation.
