## We Care About Your Privacy

We and our 878 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting I Accept enables tracking technologies to support the purposes shown under we and our partners process data to provide. Selecting Reject All or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the Show Purposes link on the bottom of the webpage. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

## ACKNOWLEDGMENTS

I would like to thank Ulf-Dietrich Reips, Klaus Jonas, Vera Kupper, Jürg Tobler, Christian Fitze, Thomas Häfliger, Andrew Marks and Andreas Reichlin for valuable comments and discussions. Financial Support from the members of the University Priority Program "Finance and Financial Market" at the University of Zurich is gratefully acknowledged. We also thank Ulf-Dietrich Reips, ASIP, Watson Wyatt and PPC Metrics for their technical support.

## Notes

"The SBI domestic index covers only CHF bonds from Swiss companies whereas the SBI general reflects the whole universe of CHF denominated bonds. Most of the Swiss pension plans use the SBI domestic as a benchmark.

\*Only 123 out of 174 Swiss pension plans in the sample provide an answer to this question.

2. Verordnung über die berufliche Alters-, Hinterlassenen- und Invalidenvorsorge (BVV 2), articles 50 to 59.
3. A pension plan portfolio is defined as a single mandate to an in-house or external asset manager within a certain asset class or a consolidation of single mandates of a pension plan within an asset class. There is no further data available about the performances of each single mandate that is included in the consolidation of mandates of a pension plan.
4. In 2004 [BFS \[2004\]](#) counted 2935 pension plans in Switzerland. There is a decreasing trend in the last 10 years.
5. The risk free rate is the 12 month money market return according to the Swiss National Bank (SNB) for the period from June 30, 2003 (June 2001) to June 30h, 2006, and is 0.78% (1.47%) annualized.
6. For Swiss equities it is easier to replicate the market index (SPI) than for world equities because the universe of shares is much smaller. That is why different levels of tracking errors for Swiss and world equities are used to define active portfolios. The relatively homogenous universe of CHF bonds in the SBI domestic explains the low tracking error limit to define active portfolios.
