## We Care About Your Privacy

We and our 912 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

# Notes

1. We are aware that the sample used here is whittled down significantly from those originally included in the household-level NCVS. This raises possible concerns about bias in our estimates—namely, that respondents who completed the ITS are unique from those who completed other portions of the interview or who did not complete the study at all. These concerns are lessened by the knowledge that the original researchers found little or no bias stemming from nonresponse in the ITS estimates (Harrell & Langton, [2013](#)).
2. The NCVS measures income as a categorical variable rather than a continuous variable.
3. Analyses run prior to imputation produced results identical to the analyses run following imputation; therefore, biased results as a product of imputation are unlikely.
