## ABSTRACT

Natural gas can be targeted to different sectors of the country, to decrease the financial position of the country. It is, therefore, important to estimate the potential of natural gas in Pakistan. The natural gas industry in Pakistan is well managed and organized. The natural gas can be used to feed different sectors of the country, to decrease the financial

burden of importing oil, and to reduce CO<sub>2</sub> emissions. However, increasing the gap of demand-supply for natural gas in the future, declining the average gas reserves, and postponing the gas import may challenge the natural gas industry, climate, and performance of Pakistan's economy. Thus, these concerns must be addressed to help the natural gas industry for an easy transition to a low-carbon future.
