## Abstract

Multiple sectors within U.S. crop industries—growers, elevators, handlers/shellers, processors, distributors, and consumers—are affected by aflatoxin contamination of commodities, and have the potential to control it using methods developed at both the pre- and postharvest levels. While methods exist, adoption is low; thus, we seek to investigate ways to increase adoption. We believe there are at least three ways to improve adoption of existing aflatoxin control techniques: (1) providing economic incentives; (2) proving and or improving cost-effectiveness of the control methods; and (3) education/outreach across all the relevant industry sectors. Frequently within a commodity there is a mismatch in economic incentives, such that different sectors bear the brunt of aflatoxin costs at disproportionate rates. For example, corn and cottonseed

growers bear most of the cost for aflatoxin control, whereas in peanuts and tree nuts, shellers and handlers incur the costs of aflatoxin control. Thus, peanut and tree nut growers may have no economic incentive to apply preharvest aflatoxin control. Postharvest control options are limited and in many cases are not yet approved by the EPA or FDA. The Kaldor-Hicks efficiency criterion may help to resolve this economic dilemma. If this criterion was to be applied to aflatoxin control in peanut and tree nuts, growers could be compensated by shellers/handlers to adopt preharvest aflatoxin control methods. However, the control methods must be cost-effective for this compensatory arrangement to work. We present three case studies of cost-effectiveness to reduce aflatoxin contamination in different crops: AF36 in cottonseed, Bt in corn, and Afla-Guard in peanuts.

## Acknowledgment

This work was funded in part by a cooperative agreement from the Aflatoxin Elimination Workgroup, a partnership of the USDA Agricultural Research Services (ARS) and U.S. crop industries. The authors wish to thank the following individuals for their insights and information on aflatoxin costs in commodities affected by aflatoxin: Hamed Abbas, Julie Adams, Larry Antilla, Paul Bertels, Bruce Campbell, Peter Cotty, Joseph Dorner, Bruce Hammond, Merle Jacobs, Robert Klein, Marshall Lamb, Russell Molyneux, Jane Robens, Howard Valentine, Phillip Wakelyn, and Thomas Wedegaertner.
