Show Purpose

The DSI is a capitalization-weighted index modeled on the S&P 500 but with a combination of exclusionary and qualitative screens used in its construction. The screens eliminate from the DSI companies that derive 2 percent or more of sales from military weapons systems, derive any revenues from the manufacture of alcohol or tobacco products, or derive any revenues from the provision of gaming products or services. The qualitative screens reflect the entire company record on diversity, employee relations, the environment, and similar issues.

For the May 1990 to September 1998 period, the DSI beat the S&P 500 by a small margin when performance was measured by raw returns. The mean arithmetic annualized return of the DSI in the study period was 17.31 percent, which exceeded the 16.95 percent mean return of the S&P 500. Beta and standard deviation both indicated that the DSI is somewhat riskier than the S&P 500. When risk-adjusted returns were measured, the S&P 500 beat the DSI by a small, statistically insignificant, margin.

The Domini Social Equity Fund, a mutual fund indexed to the DSI, uses the DSI social screens. Some other socially responsible mutual funds, however, do not use the DSI screens. For example, the Amana Fund screens reflect Islamic principles, and the Meyers Pride Fund screens in companies that support gay rights. The screens do share some common themes: 84 percent of socially screened portfolios exclude tobacco, 72 percent exclude gambling, 69 percent exclude weapons, and 68 percent exclude alcohol.

The risk-adjusted performance of the study's 31 socially responsible mutual funds lagged the S&P 500 by an average of 5.02 percentage points a year when risk was measured. Conventional mutual funds outperformed socially screened funds by an average of 5.02 percentage points.

The difference in performance between conventional and socially screened mutual funds was statistically significant. The performance of conventional mutual funds was significantly better than the performance of socially screened mutual funds. The general tilt of the market toward conventional stocks in the period of the study was also statistically significant.

Socially screened mutual funds or as socially screened mutual funds act as sword-wielders against those companies that are socially irresponsible.

responsible investing acts as a banner when it rallies the public to use political action as swords. For example, the social responsibility movement played a role in the battle that led to the imposition of high taxes and settlement costs on tobacco companies.

Socially responsible investments provide insights into the general demand for securities that meet investors' search for value-expressive as well as utilitarian features in their investing. In the future, a comprehensive model of asset pricing will need to describe how both utilitarian and value-expressive features determine the demand for investments and their expected returns.

I thank Jennifer Clayton, Ramie Fernandez, Tom Kuh, Lloyd Kurtz, John Rekenhaller, and Jonathan Scheid and acknowledge financial support from the Dean Witter Foundation. I also thank Sheridan Pauker and Jonathan Scheid for their help with the corrections.
