## Abstract

This paper investigates the relation between investor sentiment and stock returns on the Istanbul Stock Exchange, employing vector autoregressive (VAR) analysis and Granger causality tests. The sample period extends from July 1997 to June 2005. In the VAR models, stock portfolio returns and investor sentiment proxies are used as endogenous variables. Two dummy variables accounting for natural and economic crises are used as exogenous variables. The analysis results suggest that, excepting shares of equity issues in aggregate issues, stock portfolio returns seem to affect all investor sentiment flows, odd-lot sales, and stock market sentiment does not appear to affect stock market returns. The results also suggest that stock returns seem to affect all investor sentiment flows, odd-lot sales, and stock market sentiment does not appear to affect stock market returns.
