Putin's Economic Record: Is the Oil Boom Sustainable?

PETER RUTLAND

The economic system of Russia has undergone such rapid changes that it is impossible to obtain a precise and accurate account of it ... Almost everything one can say about the country is true and false at the same time. (Keynes 1925)

WESTERN OBSERVERS ARE DIVIDED OVER HOW TO ASSESS President Vladimir Putin's economic record. Some credit Putin with having engineered a rags-to-riches transformation of the Russian economy. Others condemn him for having squandered an opportunity to complete the transition to a competitive market economy, a job left half-done in the 1990s.

The raw data are impressive (see Table 1). The eight years of Putin's presidency saw a doubling of living standards, a 70% increase in GDP, the settling of nearly all Russia's foreign sovereign debts, and the accumulation of a war chest of \$402 billion foreign currency reserves as of March 2008.¹ In current dollar prices, GDP went from \$200 billion in 1999 to \$1.26 trillion in 2007. Russia moved up from being the twentieth largest economy in the world to the seventh. The World Bank estimates the Gross National Income per capita at \$5,780 in 2006, with a GNI of \$823 billion (World Bank 2007).

Sceptics argue that this economic boom cannot be sustained, and is a house built on

The 48% share in part reflects the under-valued exchange rate. The World Bank's purchasing power estimate for 2002 boosted Russian GNI from \$306 billion to \$1,165 billion. This would accordingly reduce the share of trade in GDP.

The reform also coincided with an increase in enforcement by the tax police, so advocates of the Laffer Curve should be wary of using Russia as an example vindicating their theory. (The Laffer Curve posits that a cut in tax rates will lead to an increase in tax revenue.)

That placed Russia 121 out of 163 countries in 2007, an improvement over 49 out of 52 in 1997, see http://www.transparency.org/policy_research/surveys_indices/cpi/2007, accessed 20 April 2008.

There are 1,125 billionaires on the list, including 439 Americans, 87 Russians and 59 Germans.

By 2004, the largest companies by share of reserves were: Lukoil with 23%, Rosneft (including Yuganskneftegaz) with 14%, TNK-BP with 12%, Yukos with 11%, Surgut with 9%, Gazprom with 9%, Tatneft with 8% and Bashneft with 3% (EIA [2006](#); Grace [2005](#); Considine & Kerr [2002](#)).

Whereas

elines, in

Russia the state retained control over the pipeline system, through the state-owned

corporation Transneft, which handles 71% of Russia's crude exports. A total of 14% go by rail, 3% by the Caspian Pipeline Consortium, and the remainder by sea (EIA [2006](#)).

These are Sakhalin-1 and Sakhalin-2 led, respectively, by ExxonMobil and Royal Dutch Shell, and the Kharyaga project in Siberia, led by France's Total. Exxon signed an agreement for Sakhalin-3 in 1993, but it lapsed and the license has been revoked.

Independent gas producers account for 14% of Russia's output, nearly doubling their production from 2000 to 2005, but they are not allowed to export (Moscow Times, 23 June 2005).

Astaf'eva estimates that changes in the oil price alone accounted for an estimated 27% of the growth over 1998–2007 (Astaf'eva [2007](#), p. 38).

I am grateful to Francisco Rodriguez for this point.

Spilimbergo estimates that without oil windfall revenues (i.e. with oil at \$20 a barrel), the budget would have been in surplus in 2000–2001, but sliding into deficit reaching 2.6% of GDP by 2005 (Spilimbergo [2005](#), Table 3).
