Nonlinear linkages between financial risk tolerance and demographic characteristics

Robert Faff , Terrence Hallahan & Michael McKenzie Pages 1329-1332 | Published online: 21 Sep 2009

General Cite this article Artps://doi.org/10.1080/13504850701381123

Notes

¹ Females typically show a lower preference for risk than males – for example, Lewellen et al. (<u>1978</u>); Bajtelsmit and Bernasek (<u>1996</u>); Powell and Ansic (<u>1997</u>); Grable (<u>2000</u>); Grable and Joo (<u>2000</u>); Halek and Eisenhaeur (<u>2001</u>).

²Roszkowski et al. (<u>1993</u>) suggest that single people have higher financial risk tolerance than married individuals because they have less responsibilities than married people, particularly with respect to dependents. However, a number of studies have failed to identify any significant relationship between marital status and financial risk tolerance (McInish, <u>1982</u>; Masters, <u>1989</u>; Haliassos and Bertaut, <u>1995</u>).

³ Higher attained levels of education have been found to be positively related to higher financial risk tolerance – see, for example, Haliassis and Bertaut (<u>1995</u>); Sung and Hanna (<u>1996</u>).

⁴ The impact of income and wealth tend to support a positive relationship with levels of risk tolerance – see, for example, Friedman (<u>1974</u>); Cohn et al. (<u>1975</u>); Riley and Chow (<u>1992</u>); Schooley and Worden (<u>1996</u>); Shaw (<u>1996</u>); Grable and Lytton (<u>1999</u>).

⁵ The FinaMetrica Personal Financial Profiling system is a proprietary, computer-based risk tolerance measurement tool. It has been available commercially to the Australian financial planning industry since 1998 and was introduced in the US in 2002. See www.FinaMetrica.com.au for further information about the FinaMetrica system.

4, net assets between \$500 000 and \$1 000 000; and a value of 5, net assets over \$1 000 000.

¹⁰ The variable CINC is interacted with DMARR, since it is only validly defined for 'married' respondents.

¹¹ The nonlinear effect in NASS is dropped due to insignificant results.
