ANDREA TERZI

The independence of finance from saving: a flow-of-funds interpretation

John Maynard Keynes's proposition that consumption-and-saving decisions on the part of the public exert no direct influence on the conditions of finance faced by investors has unsuccessfully been striving to escape the confining realm of unorthodox theory. Keynes's logic in establishing this point has been defined by his critics as "a historical puzzle" (Tsiang, 1980, p. 476), the steps of his analysis as "retrogressive" with respect to Wicksellian tradition (Leijonhufvud, 1981, p. 170), and his consequent statements in terms of the so-called paradox of thrift as "bombastic" (Miller, 1985, p. 276).¹

Economists who, explicitly or implicitly, adhere to the *loanable funds* theory of interest claim that a public's shift from consumption to saving with the purpose of purchasing securities generates, *ceteris paribus*, an excess supply of funds that eases conditions in the capital

The author is Professor of Economics at Franklin College, Lugano-Sorengo, Switzerland.

He wishes to thank the Editor for his valuable comments and suggestions for revision. An initial version of this work was presented at a seminar held at Rutgers University in June 1985 and was a part of the panel discussion of the round table on "Recent Interpretations of the Finance Motive" at the Fifth International Summer School of Economics in September 1985. Criticisms by participants in those circumstances are thankfully acknowledged.

The author is grateful for financial support by the Consiglio Nazionale delle Ricerche, Rome.

¹If a positive relationship between saving-and-lending and finance availability is maintained (which is the case of most of mainstream Keynesian macroeconomics), then the "paradox" holds only under special circumstances. Lipsey and Steiner (1981, p. 527), for example, warn that increased household savings have no impact on investment only if there is some obstacle in the intermediation process between savers and investors. This implies that, normally, aggregate saving is no longer a *residual* in the sense of Keynes (1936, p. 64).
